Hyderabad, India

SUMMARY

DevOps Engineer with nearly 3 years of infrastructure and systems engineering experience supporting enterprise environments and building cloud-native automation using AWS, Terraform, Kubernetes, GitHub Actions, and Python. Experienced in infrastructure automation, CI/CD pipelines, observability, and Linux systems with AWS Solutions Architect Associate certification.

SKILLS

Cloud & Infrastructure: AWS (EC2, VPC, ALB, ASG, RDS, ECS, EKS, Lambda, IAM, CloudWatch, EventBridge, Secrets Manager) · GCP Compute Engine · Azure

CI/CD & Deployment: GitHub Actions · Git · Docker · Kubernetes · Ansible · Blue-Green / Rolling Deployments · Zero-Downtime Releases

Infrastructure as Code: Terraform · CloudFormation

Observability & Incident Response: Prometheus · Grafana · CloudWatch · SLIs/SLOs · Root-Cause Analysis · Post-Mortems

Automation & Scripting: Python (Boto3) · Bash · Runbooks & Self-Service Tooling

OS & Networking: Linux · TCP/IP · DNS · HTTP · SSH · VPN · VPC Design · Subnetting · NAT

Security: IAM Least-Privilege · Security Groups · Secrets Manager · MFA

EXPERIENCE

Senior Engineer

Jul 2025 – Jun 2026

Movate Technologies · Hyderabad, India

- **Provisioned** cloud infrastructure using **Terraform and Ansible**, and implemented **CICD** for automated **Kubernetes** deployment, improving deployment consistency and reducing deployment time.
- **Created and maintained** automated CI/CD pipelines for code deployment using **GitHub Actions**, eliminating **70% of manual work** and increasing engineering efficiency.
- **Designed** a multi-AZ, highly available AWS architecture — public/private/isolated subnets, NAT Gateways, **Auto Scaling Groups**, and RDS — with autoscaling policies built to absorb load spikes without manual intervention.
- **Streamlined** monitoring and logging using **Prometheus, Grafana, and CloudWatch** for a healthcare client, reducing incident response time and improving system reliability.
- **Enforced** cloud security best practices end to end — least-privilege IAM, Security Group scoping, Secrets Manager credential management, and MFA — hardening the security posture across corporate identity systems.
- **Developed** Python and Bash scripts to automate daily backups, increasing system security and reducing the risk of data loss.

Engineer

Sep 2023 – Jul 2025

Movate Technologies · Hyderabad, India

- **Owned** monitoring and alerting across a Linux, macOS, and Windows fleet via real-time dashboards and telemetry, triaging incidents and delivering structured RCAs and post-mortems to engineering teams.
- **Diagnosed** a wide-impact Linux VM outage affecting **100+ users** by tracing configuration drift, shipping a rollback fix **4 hours ahead** of the upstream engineering team's own resolution.
- **Administered** IAM controls — MFA enforcement, SSH/VPN troubleshooting, access recovery, and VCS repo permissions — keeping org-wide access secure and uninterrupted.
- **Automated** package management, service restarts, performance diagnostics, and reporting-agent runs with **Bash**, significantly cutting manual operational effort across multi-OS fleets.
- **Maintained** static IP host records, login/root access controls (NSS cache), and configuration documentation across lab environments to keep support procedures accurate and repeatable.
- **Partnered** cross-functionally with engineering teams on defect tracking, incident escalation, and post-incident reviews.

PROJECTS

[Production-Grade 3-Tier AWS Architecture](#) — *Terraform, EC2, ALB, ASG, RDS, IAM, Secrets Manager, CloudWatch*

- Built a fully modular, multi-AZ AWS environment with public/private/isolated subnets, dual NAT Gateways, CPU-triggered Auto Scaling Groups, RDS PostgreSQL with Secrets Manager credential injection, and CloudWatch alarms for proactive alerting.

[Zero-Downtime Rolling Patch System](#) — *Ansible, AWS ALB, Linux*

- Built an Ansible playbook that patches Linux kernels one node at a time — automating ALB de-registration, connection draining, reboot, and health-check re-registration with zero downtime.

[Serverless EBS Snapshot Cleanup Pipeline](#) — *Python, Boto3, Lambda, EventBridge, CloudWatch*

- Built a scheduled Lambda function that finds orphaned EBS snapshots not attached to any volume or AMI and deletes them automatically, keeping storage costs down without manual intervention.

EDUCATION

B.E. in Electronics and Communication Engineering

2020 – 2023

Lords Institute of Engineering and Technology · Hyderabad, India

Diploma in Electronics and Communication Engineering

2017 – 2020

Ratnapuri Institute of Technology and College of Polytechnic · Hathnoora, India

CERTIFICATIONS

AWS Certified Solutions Architect – Associate (SAA-C03) · Amazon Web Services

Microsoft Certified: Azure Fundamentals (AZ-900) · Microsoft

ACHIEVEMENTS

- Hi-Flyer Award — recognized for outstanding performance at Movate Technologies, 2025–2026.
